

Cop 27

When will you recognise the treachery of climate change? In no time, you will have no planet to live on! Thankfully for your inability to fix the problem, you left us to deal with it - to sort it out. How dare you?! My dream was to live on an energized planet but that was demolished by your selfishness. Over farming is causing Methane that spreads through the globe like an unstoppable plague and all you do is count money like greedy villains. How dare you?! How many days does it take to act? How many ecosystems need to collapse?

We can't continue to be surprised by the cause of this crisis. For many years, the evidence is cristal clear that global trauma is clear but ignored. You tell us you're on our side and you care. We have no reason to trust you. If you know of all this damage and still don't make a change then you're the worst to look up to.

Don't you care about your future generation?

Temperature is rising, ice-caps are melting and sea levels are rising, Habitats are lost. Here me out. Act on what I say. Don't ignore the danger and do something.

You are failing us. Betrayal is all you know. You are betrayal. We (the young people) understand perfectly. You don't. We need you whether you like it or not. There is no second chance because we need you. The line is drawn here.

Thank you
